

**No.1 manhole cover supplier in
Finland and Estonia**

About us

Combi Works is Finnish based company operating in infra and manufacturing service segments. Our core values are to be local in our target markets with product range and people, to be innovative and modern with using digitalized tools and to be flexible and open.

Our own product range covers Manhole covers, AluFix safety guardrails, ULMA channel gratings and our tree gratings.

Tyylikkään AluFix®EVO:n asennus käy helposti ja nopeasti itselukkiutuvien kiinnitysmekanismien avulla, eikä vaadi erillisiä työkaluja.

We have acquired AluFix safety guardrails

AluFix® is a unique temporary guardrail system which can be used to allow for safe work at height. It can be used on any roof with up to 10° incline freestanding. It has been independently tested and certified to meet the EN 13374-A standards.

AluFix® consists of a simple and durable aluminum support structure and railing elements which are used to create a continuous safety railing along the edge of a work area. The system consists of securely locking mechanisms which connect without the use of any tools.

We design, manufacture

and market cast iron products based on the needs of the local market.

Designing products, we follow the valid standards, EN124 1994 and EN124-2 2015. Combi Works is an active member of CEN workgroup.

The selection of the range is engineered for the intended use and made of the most suitable materials.

Our main range we offer in 3 different versions - Optimized, Normal and Heavy, in addition to special series according to the conditions of water companies or municipalities
